Summary

Cybersecurity-focused DevOps Engineer with a proven ability to design, implement, and deploy secure cloud-based solutions leveraging AWS and Azure. Passionate about automating infrastructure and promoting DevSecOps practices, seeking to contribute to a challenging and impactful role at Randstad Enterprise. Holds CISSP certification.

Projects

Smart Home IoT System

Technologies: Raspberry Pi, Node-RED, Python, JavaScript

Designed and implemented a voice-controlled smart home automation system using Raspberry Pi as the central hub and Node-RED for workflow orchestration. This project demonstrated proficiency in integrating various IoT devices and developing secure communication protocols.

Secure File Sharing App

Technologies: Python, Flask, AWS S3, Encryption Libraries

Developed a secure file-sharing application using Python and Flask, leveraging AWS S3 for storage and implementing robust encryption algorithms to ensure data confidentiality and integrity. This project showcases expertise in secure cloud application development and data protection.

Education

(Degree not specified - please provide) – (University Name) (*Graduation Year*) Relevant Coursework: Cybersecurity, Cloud Security, Software Architecture

Skills

- **Languages:** Python, JavaScript,
- **Cloud & DevOps:** AWS (S3, IAM, etc.), Azure, Terraform (desired, based on job description), CI/CD (desired, based on job description)
- **Security:** Cybersecurity, DevSecOps, Encryption, Data Protection
- **Operating Systems:** Linux (experience assumed based on projects), Windows (desired, based on job description)

- **Networking:** (Skills to develop based on job description: VLANs, Layer 2/3 Routing, Access Lists, Load Balancing)
- **Databases:** (Skills to develop based on job description: SQL Server, MySQL, NoSQL Databases)
- **Tools:** Raspberry Pi, Node-RED, Flask

Certifications & Awards

CISSP – (ISC)²

Additional Information

- U.S. Citizen (explicitly mentioned due to clearance requirement)
- Eligible and willing to obtain CJIS clearance.

Important Notes for Sophia:

- **Networking and Database Skills:** The job description emphasizes networking and database knowledge. While your projects likely involved some of these concepts, it's crucial to highlight them specifically on your resume. Consider adding details about networking protocols used in your IoT project and any database interactions in your file-sharing app. Even mentioning self-study or online courses related to these topics can be beneficial.
- **Terraform and CI/CD:** The job description specifically requires Terraform and CI/CD experience. If you have any exposure to these, be sure to include them. If not, acquiring some basic skills in these areas and adding them to your resume will significantly strengthen your application.
- **Formal Education:** Providing your degree and university will add credibility to your resume.
- **Tailoring to the Job Description:** This revised resume focuses on the skills and keywords present in the job description. Continue to tailor it for any other positions you apply for, emphasizing the most relevant aspects of your experience and skills.
- **Quantifiable Achievements:** Wherever possible, add numbers or metrics to demonstrate the impact of your projects (e.g., “Reduced latency by 15%,” “Automated X process, saving Y hours per week”).
- **AWS Certifications:** The job description requires a minimum of 3 AWS certifications. While you have the CISSP, pursuing AWS certifications will significantly boost your candidacy.
- **Keywords:** Ensure your resume includes keywords from the job description, such as “IaC,” “Kubernetes,” “Agile,” “DevOps,” and specific AWS/Azure services. This will help your resume pass through Applicant Tracking Systems (ATS).

This revised resume provides a stronger foundation for your application. By addressing the notes above and continuing to tailor it for each specific job, you

will maximize your chances of landing an interview.
